## PREFACE

Like other sectors of economy, time series statistics is essential for planning, development and improvement of the transport system. Researchers, Planners, Policy Makers and Administrators largely depend upon the sound data base for carrying out in-depth analysis. The need for data increases exponentially as the economy grows and develops complex inter-dependencies.

In order to meet the requirements of data users the National Transport Research Centre, since its creation, started compiling the transport statistics in a systematic manner. The first Statistical Bulletin covering all modes of transport containing time series data (1947-79) was issued in November, 1980. Since then about half a dozen Bulletins have been issued covering data upto 1990.

The present issue is the latest in the series covering available data upto the year 1997. This time efforts were made to segregate the trucks according to the configuration of axles, but due to poor response from the respective agencies, it has not been possible to publish the data as envisaged. However, percentage composition of multi-axled trucks estimated on the basis of traffic count survey (1995-96) has been tabulated as under:-

<u>2-Axle</u>	<u>3-Axle</u>	<u>3 Axle Trailer</u>	<u>4-Axle</u>	<u>5&amp;6 Axle</u>	<u>Total</u>
68.2	18.7	3.3	7.6	2.2	100

The vehicular population at national/provincial level alongwith annual growth rates (1987-97 & 1991-97) are given below.

	<u>Vehicles</u>	<u>% Composition</u>	<u>Annual Growth Rate</u>
