TRANSPORT BULLETIN
ROADS

(1982 TO 1991)

SAJJAD HUSSAIN HUNDAI
DEPUTY CHIEF

NTRC NO-169

JULY, 1992

FOREWORD

Accurate statistical data is a pre-requisite for sound planning and policy formulation. Researchers, planners, policy makers and administrators largely depend upon the sound data base for carrying out in-depth analysis. The need for data increases exponentially as the economy grows and develops complex inter-dependencies. This has stimulated a demand for precise and timely statistical information as an aid in solving national and international problems. The considerable data put out by various governmental and other agencies can meet the research and planning requirements to a great extent, provided these are collated in a usable form.

Transport is universally recognised as a major element of "Economic Potential" of any country on account of its impact on the socio-economic life of the people and consequently the industrial and economic production. Most of the developing countries realizing its crucial importance invest as much as 25-30 percent of their total public expenditure in transport. In the past, it was felt that the transport statistics available in Pakistan were not only fragmentary but also inconsistent and unreliable. In order to meet the outstanding requirements, the National Transport Research Centre made it as one of its major goals and started compiling the transport statistics in a

(b)

systematic manner. This data regarding road length in Pakistan has been collected from Provincial Highway Departments, District Councils, Municipal Corporations/Committees and Cantonment Boards. The first statistical bulletin containing a variety of statistics covering all modes of transport for the period 1947-73 was issued in November, 1980. This was followed by another one in November, 1981. In April, 1983, two volumes of Transport Statistics containing/comprehensive data covering all aspects of transport from 1974-83 were published. The two bulletins overcame the problem of lack of accurate and consistent statistics to a large extent. These documents were highly appreciated by the researchers and planners at National and International level. The present publication is basically another edition of the earlier bulletins containing 10 years data upto the year 1991.

With a view to provide upto-date and accurate statistics, National Transport Research Centre intends to issue such bulletins regularly on yearly basis. The statistics contained in the previous bulletins have been computerized and the data contained in this publication is also being computerized. Suggestions to improve the publication are welcome.

**M. SADIQ SWATI,
SENIOR CHIEF (INTRC)**

Note 1 : Due to nonavailability of road construction machinery ,this M.Committee is unable to construct the black top roads so C&W department is the only agency for constructing such type of roads having enough machinery and all roads in the premises of M.committee has been shifted to C&W department for black topping.
The defficiency of black topping in year wise is due to above mentioned causes.

Note 1 : Due to nonavailability of road construction machinery, this M.Committee is unable to construct the black top roads so C&W department is the only agency for constructing such type of roads having enough machinery and all roads in the premises of M.Committee has been shifted to C&W department for black topping. The deficiency of black topping in year wise is due to above mentioned causes.
